| [github.com/v1tor2003](https://github.com/v1tor2003) | Ilhéus - BA, Brazil

## EDUCATION

### State University of Santa Cruz (UESC)

Bachelor of Science in Computer Science

Ilhéus, BA, Brazil

2021 – 2026

## PROFESSIONAL SUMMARY

Software Engineer with strong expertise in backend engineering and high-throughput distributed systems across the .NET (C#, ASP.NET Core), TypeScript with NestJS, and AWS cloud ecosystems. Hands-on experience designing Event-Driven Architectures (EDA), microservices, asynchronous messaging (Amazon SQS/SNS), distributed caching (Redis), and secure financial integrations with idempotent processing. Rigorous technical standards in engineering workflows to ensure validated, resilient deliverables with extensive unit, integration, and load testing (NBomber), technical leadership, Clean Architecture, DDD, and observability in mission-critical environments.

## PROFESSIONAL EXPERIENCE

### GTEEX Revolution

Mid-Level Backend Software Engineer (.NET, NestJS & AWS)

On-site

Nov. 2025 – Present

- Designed and developed high-throughput, low-latency microservices in C# (.NET 8) and TypeScript (NestJS) for a web-based drone fleet management and integration platform, supporting real-time command dispatch.
- Architected real-time telemetry ingestion pipelines with AWS IoT Core, orchestrating massive streaming dataflows via Amazon Kinesis and serverless processing with AWS Lambda.
- Implemented Event-Driven Architecture (EDA) with Amazon SQS and SNS for decoupled asynchronous inter-service communication, enforcing Dead-Letter Queue (DLQ) policies, retries, and idempotency.
- Eliminated concurrency bottlenecks under peak load with distributed caching in Redis, persistence with DynamoDB and SQL Server, automated deployments via Docker and AWS ECS, and observability with CloudWatch.

### ClosedFun

Tech Lead & Backend .NET Engineer

Remote

Nov. 2024 – Nov. 2025

- Provided technical leadership and backend architecture in ASP.NET Core (.NET 8), applying Clean Architecture, Sliced Architecture, DDD, and engineering best practices to guide the development team.
- Engineered scalable microservices and APIs integrated with payment gateways (Stripe, Mercado Pago, EfiPay), guaranteeing idempotent transactions, financial reconciliation, and secure webhook handling.
- Implemented authentication with ASP.NET Core Identity and social login (Google OAuth2); structured messaging with Amazon SQS and SES, CI/CD pipelines, and observability with Prometheus and Grafana.

### CEPEDI & Ingeniçp - (Restic36 II)

Software Resident (Backend)

Ilhéus, BA, Brazil

Jan. 2025 – Oct. 2025

- Developed and maintained microservice APIs with Spring Boot and PostgreSQL for the enterprise Alliance for Mobility” project, optimizing complex PostgreSQL queries via Hibernate/JPA.
- Implemented authentication flows integrating Supabase with Spring Security for role-based access control, ensuring continuous quality through unit and integration testing in an Agile Scrum environment.

### CEPEDI - (Restic36 I)

Full-Stack Software Resident (.NET & Angular)

Ilhéus, BA, Brazil

Jul. 2024 – Dec. 2024

- Built scalable RESTful APIs in C# (.NET) with Clean Architecture integrated with Angular frontends; standardized Docker containers and CI/CD pipelines with automated unit tests in xUnit.

### CRIPSIA Technology

Junior Full-Stack Developer

Remote

Jun. 2023 – Jan. 2024

- Developed a clinic management system with Laravel and MySQL, integrating Google Calendar API in real time and building dynamic dashboards with Vue.js and Tailwind CSS.

### UESC (CCAM)

Web & Cloud Researcher / Developer

Ilhéus, BA, Brazil

Dec. 2022 – Nov. 2024

- Contributed to R&D modernizing legacy public management systems to Next.js and cloud services, refactoring relational schemas and elevating endpoint security.

## TECHNICAL SKILLS

---

**Languages:** C#, .NET 8/9, ASP.NET Core, TypeScript, SQL (T-SQL, PostgreSQL), Java, Python, Go **Cloud & DevOps (AWS):** AWS (IoT Core, Kinesis, SQS, SNS, ECS, Lambda, DynamoDB, RDS, CloudWatch, S3, API Gateway, IAM), Docker, CI/CD, Prometheus, Grafana **Architecture & Distributed Systems:** Microservices, Event-Driven Architecture (EDA), CQRS, Vertical Slice Architecture (Sliced Arch), Clean Architecture, Messaging (RabbitMQ, MQTT Brokers, SQS/SNS), Distributed Caching (Redis), RESTful APIs, gRPC, Idempotency **Databases & BaaS:** Microsoft SQL Server, PostgreSQL, TimescaleDB, CouchDB, MongoDB, Redis, DynamoDB, Supabase **Testing & Quality:** xUnit, Moq, Integration Testing, Load Testing with NBomber, TDD, Git, Agile Methodologies (Scrum), Clean Code, SOLID

## RELEVANT COURSES & CONTINUOUS LEARNING

---

**.NET & C#:** Web API and Microservices Development with ASP.NET Core — *Microsoft Learn* **AWS Cloud:** AWS Cloud Practitioner Essentials & Serverless Architecture — *AWS Skill Builder* **TypeScript & Node.js:** Backend Development with TypeScript, Node.js & Express — *freeCodeCamp* **DevOps & Containers:** Docker Essentials & Kubernetes Fundamentals — *Cognitive Class / IBM*

## LANGUAGES

---

**Portuguese:** Native | **English:** Fluent / Advanced (Technical communication, reading, and writing)
